RA – CHART: >90

RA refers to the average value of R1 to R8.

R9 is the score that represents how accurately a light source will reproduce strong red colors. "Accurate" is defined as similarity to daylight or incandescent bulbs, depending on the color temperature.

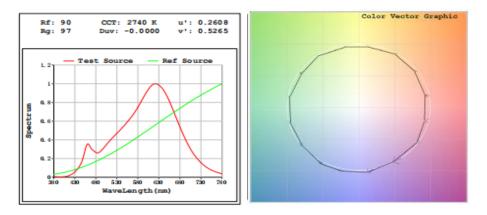

TM30 GRAPHIC

TM-30 deals with the color rendition of object.

R_f- a fidelity index that is similar to the commonly used CRI

 $R_{\rm g}\mathchar`-$ a gamut index that provides information about saturation

Color vector graphic- a graphical representation of hue and saturation relative to a reference source.
